Production-Ready Capstone Project Guide

Yeh document aapko aapke final milestone (Internship Portal) ko complete aur submit karne me madad karega.

1. Objective & Deliverables (Aapko kya banana hai)

- **Objective:** Aapko apne full-stack portal me deployment, quality assurance, logging, performance optimization aur product thinking ka use demonstrate karna hai.
- **Live Application Link:** Ek working deployed link jahan aapka full-stack project live chal raha ho (Vercel, Netlify, Render ya Railway par).
- **GitHub Repository:** Aapke clean code ki ek public ya view-only repository.
- **Test Evidence:** Aapke tests ka proof jaise screenshots, logs ya automated test reports.
- **Walkthrough Video Link:** Ek 2-3 minute ka video (Loom ya Drive link) jisme aap portal ke core features aur apni engineering choices ko samjha rahe hon.

2. Passing Checklist (In steps ko follow karein)

Step A: Polish User Experience

- Portal ka full-stack flow seamless hona chahiye aur mobile screens par completely responsive hona chahiye.

Step B: Backend & Production Readiness

- Code me proper backend/frontend logging (jaise Winston ya console logs) lagayein jo server status track kare.
- Ek health check endpoint banayein (e.g., /api/health) jo check kare ki server aur database active hain ya nahi.
- GitHub par ek professionally written **README.md** file banayein jisme setup instructions likhi hon.

Step C: Automated & Manual Checks

- Project par Accessibility (Loom/Lighthouse tool), performance audits, security, aur regression checks run karein.

3. Submission Process (Submit kaise karein)

1. Apni GitHub Repository ke README file me sabse upar **Live Application Link**, **Video Link**, aur **Test Proofs** ko clear formats me attach kar dein.

2. Aisa karne se aapko alag-alag files upload nahi karni padengi; sirf **ek single GitHub Repo link** hi submission portal par lagana kaafi hoga.
3. Portal par sabse niche center me diye gaye **Submit** button par click karein aur apna link paste karke project submit kar dein.
